

Participant Handout

Understanding the EDR Alerts

You have been provided with two EDR alerts relating to:
Alex Morgan & workstation LOS-FIN-WS133

REVIEW BOTH ALERTS TOGETHER AND ESTABLISH:

What initiated the activity?

What controls succeeded, and which failed?

What was the activity attempting to do?

Was Alex Morgan's host ultimately compromised?

Focus on reconstructing what happened - not simply extracting indicators

Email Analysis

Review the email content and headers together

WHAT IS THE MESSAGE, PURPOSE AND ORIGIN?

- What is the email asking the recipient to do?
- What is the likely objective of the message?
- Is anything attached?
- Does it look legitimate, how?
- Who does the message claim to be from?
- What do authentication results show?
- What infrastructure handled the message?
- Domains, IP addresses, message identifiers?

The header helps you to determine where the message came from
