

Participant Handout

Pivoting the Investigation

You have established what happened to Alex Morgan
What would you do next?

IDENTIFY YOUR POTENTIAL PIVOTS:

What new leads have the EDR alerts provided?

Which lead would you prioritise?

What additional evidence could you obtain?

Why?

There may be more than one valid investigative pivot

Windows Event/Host Timeline

A chronological view of activity observed on a device, used to reconstruct what happened and in what order

- What events do you consider significant?
- What remains unknown?
- What is the sequence of activity?
- What does the evidence support?

What evidence would you want next?

Ransom Note

A message used by a ransomware actor to communicate with the victim following a compromise

- What indicators can you extract?
- What does the payment info tell you?
- What claims are being made?
- What can you corroborate?

What would you investigate next?

Infrastructure Pivoting

One technical indicator can expose an infrastructure network look for what connects them

- What does the domain resolve to?
- What subdomains are associated to it?
- What do registration records show you?
- What infrastructure is associated with the same IP?
- What do certificates reveal about infrastructure?
- Does historical data show reuse?

Follow relationships - don't just collect indicators
